

GPRS Router GPRS-20

GPRS router
GPRS-20
GPRS router
Supports EDGE
10/100 Ethernet
Autosensing
24 V power supply

The GPRS-20 is based on the MC75 from Siemens. With a Linux-based controller, the device becomes a fully fledged router.

The connection to the mobile wireless network is established automatically. Using the DynDNS function, the current IP address of the router is published on the Internet. The devices connected to the router can be reached at any time on the Internet via an IPsec tunnel.

The device is configured using an HTML user interface. The HTML server can be reached via the LAN interface and via the Internet. The router also supports a GRE tunnel and NAT (Network Address Translation).

GPRS Router GPRS-20

Technical specifications

Frequency bands	GSM 850, 900, 1800, 1900
Ethernet interface	10/100Base-T, autosensing, RJ-45 plug
USB interface	USB 2.0
Installation	DIN rail adapter
Housing	80 mm x 105 mm x 45 mm
Power supply	10-30 V
Temperature range	-20 to +55 °C
